

OpenCSW Works : Planned Packages

Peter FELECAN

June 15, 2009

There are many products that I wish to have and which are not yet available as OpenCSW packages. The following list are those projects on which I plan to work:

- TeX Live: teTeX is no more maintained and the designated replacement is the TeX Live distribution. This being a **huge** project, its availability as a CSW package depends a lot on my available free time.

There are other packages, requested by the community at large and, if you have the will and stubbornness to become a maintainer, take a look at the package request list and start reading the OpenCSW packaging standards. Good Luck!
